

RABBIT SHIPPING CRATE

The above drawing shows a suggested rabbit shipping case developed by C.R. Walrod. This case can be used to ship breeding stock or animals to fairs and shows. It is lightweight, yet durable. It is easily handled by those responsible for handling animals during shipment. For larger breeds the case could be made longer and if necessary wider and higher. For shipping smaller animals, you could use a smaller cage.

You may place a piece of newspaper in the bottom with edges creased so that the paper comes up 2 to 3 inches all around the sides and ends. Place the straw or hay for bedding on top of the paper. When the animal is returned or received at its destination, the newspaper and bedding may be removed and the crate will be quite clean. This will reduce the amount of labor needed in cleaning the crate before it is used again. If necessary, you may attach feed and water containers inside the crate.
